

## Extensive Advantages for Hosts, Telcos, ISPs and Cable Providers

### LOW COST – HIGH PERFORMANCE OPERATING MODEL!

- **Power and precision of control**  
The CM4all OnlineDrive is a file manager, viewer and sharing application with Data Center levels of file protection, all harnessed by a direct mode of control.
- **Already proven to be successful!**  
The CM4all OnlineDrive has already proven years of successful use with one of Europe's largest ISPs and many other OEMs worldwide.
- **A lasting solution**  
The CM4all OnlineDrive offers a lasting solution for universal file storage and transfer.
- **Instantly available!**  
Licensing assures full commercial flexibility without costly in-house or external programming resource drains and reduces time to market!
- **Increase Customer Loyalty**  
Offering value-added products such as the CM4all OnlineDrive to your customers, increases customer loyalty and in turn reduces the risk of losing customers to other market offerings.
- **Runs on trusted, easy to use standard server hardware!**

### COMPLETELY TAILORED TO YOUR NEEDS!

- **Fully brandable user interface**  
The self customizable user interface of the CM4all OnlineDrive can be adapted to fit your specific Corporate Identity requirements via Cascading Style Sheets (CSS).
- **Fully customizable reseller Edition**  
Allows you to distribute licenses to your reseller even in a complex multi-tier distribution system, with comfortable customization of complete user interface via CSS.
- **Flexible quotas and traffic**  
Quotas and traffic are set to fit your pricing strategies and maximise your profits.
- **Real scalability**  
Our award-winning, powerful, yet compact technology means the CM4all OnlineDrive gives you true scalability and flexibility. Up to 100,000 customer accounts can be run on a single server.

## Proven Integration, Tailoring and a Hassle-Free Setup!

### SEAMLESS INTEGRATION & MAINTENANCE

- **Seamless Integration**  
Our cutting-edge OnlineDrive technology fits perfectly into the portfolio of any host, Telco, ISP or cable provider, matching the core competence of selling web space.
- **Remote Maintenance and Emergency Hotline**  
Our software experts maintain the software via remote access and provide a 7 day 24 hour emergency hotline for real peace-of-mind.
- **Multi-lingual GUI**  
Language barriers to your operations no longer exist.
- **Smooth integration with CM4all WebsiteCreator**  
The CM4all OnlineDrive can be configured to up-sell the CM4all WebsiteCreator and its additional existing tariff options for an even longer revenue stream.
- **No software installation at all!**  
Our system is browser-based, so no need for installation of new software or adaptation to new standards. We take care of that for you.

### EASE OF USE & SECURITY GUARANTEED

- **Browser-based intuitive control for all user levels**  
Web 2.0 file management uses a tree structure and drag-and-drop similar to Windows Explorer, making it simple and easy to use for everyone!
- **Perfectly fits inside Windows Explorer**  
Important documents can be securely stored and later viewed, shared, downloaded and edited by colleagues wherever they are in the world.
- **Tested and approved by third party usability labs**
- **WYSIWYG file management keeps it all simple**  
Your customers can create and name any number of folders, containing any number of subfolders and files, for added flexibility without any file type restrictions.
- **The CM4all OnlineDrive is accessible worldwide**  
All files and folders can be accessed as WebDAV volume for true accessibility. The CM4all OnlineDrive is a network drive in your customers' Windows Explorer!

## Online Image Editing & File Presentation

### INTEGRATED IMAGE EDITOR

- **In-house content management code for image editing**

We use our own content management code for editing images, so your customers can edit their pictures faster and easier than competitor Java based editors. The edited images can also be saved under different names to keep originals safe.

- **Most popular editing options integrated!**

Our integrated image editor gives customers the most popular editing options. Image resize/crop, colour optimization and red eye remover are just some of the editing options.

- **Custom Slide Shows**

Images can also be shown as custom slide shows. Your customers can specify the time each slide is displayed, resulting in a smooth stream of beautifully presented photos.

- **An exciting invitation functionality**

Friends and family all over the world can be invited to share special moments. Depending upon your pricing strategies, your customers can define any number of folders and manage thousands of files and images.

## Extensive File Search, Sharing and User Management

### POWERFUL FILE SEARCH ENGINE

- **Two performance-optimized file search modes**

The Standard search facility allows users to look for a file by name, location or folder. The Advanced search allows a more detailed search by file creation/modification date etc.

- **Additional search parameters for photos**

The camera type, exposure rating, lens aperture, focal length and even whether or not flash was used, can all be specified in a professional search.

### SHARING MADE EASY INCLUDING FULL PRIVACY CONTROL

- **Comprehensive user rights**

Customers can define any number of guests to view, share and even edit files stored safely in CM4all OnlineDrive's vault. Visitor access to files can be precisely and easily controlled.

- **Unique Guest lists & access rights**

One or several guests can be assigned completely different access rights for all data. In addition, access rights can be limited to a certain timeframe or to single and multiple folders.

- **Easy Password Protection functionality included**

- **Integrated email engine encourages customers to share**

Guests can be contacted at any working email address specified by the user. The invitation email will contain standard text inviting the guest to view, share or edit files online.

- **Guest access easily managed**

The invitation email sent out to guests also contains a link which takes the guest to the files according to their access rights. Customers can now conveniently share files that are often too big to send via email.

### FUTURE PROOF, TRIPLE PLAY – READY TODAY!

- **Easy integration**

With a webmail, your customers can directly store attachments within their CM4all OnlineDrive. We provide a SOAP-API for the integration of webmailers.

- **Enhanced Service Capabilities**

Third party printing and merchandizing services can be easily integrated via our standardized APIs.

- **Integrate Powerful email marketing extensions**

- **Built-in Connectivity**

Easy integration of MMS gateways for processing picture messages to cell phones and mobile devices.

- **Challenge Ready**

For connection to and full integration of various content offerings incl. streaming services. With the upcoming integration of set-top boxes you will be Triple Play ready!

## Advanced Backup Client

### EASY SYNCHRONIZATION AND SECURE DATA BACKUP

- **Enhanced Scheduling**  
Advanced multi-option scheduling automatically updates files wherever the user is and, even when offline, updates resume immediately when a connection is detected.
- **Simultaneous Sync**  
Files being saved locally can be setup to update the OnlineDrive automatically.
- **Bi-directional Synchronization**  
Schedule automatic syncing of files from your local device to the OnlineDrive or from the OnlineDrive to your local device.
- **Virtual Network Drive**  
Seamless synchronized multi-user access and control to files from anywhere in the world on numerous devices including mobile phones turning the customers' browser into a network drives.
- **Individual Customization**  
Data can be filtered to be included or excluded based on the profile. Profiles can also be scheduled separately.
- **Mutli-platform functionality**  
Accessible with Windows Vista, XP, 2000 and Mac OS/X.
